**THE USE OF MODERN INNOVATIVE TECHNOLOGIES IN FOREIGN LANGUAGE TEACHING AND ITS EFFECTIVENESS.****Fayziyeva Dinara Nuriddin qizi***Student of the Faculty of Foreign Languages, Karshi State University*

**ABSTRACT:** *In this article, the scientific-theoretical views on the formation of innovative technologies and skills as a means of teaching young people learning foreign languages are expressed. There are theories about the environmental inter-dependence of educational technologies and processes, the development and nature of views on the form of education considered in terms of principle and main source. The role of various innovative technologies in language learning and the formation of talented students-young people by means of them, considerations and opinions on increasing their level of language knowledge have been expressed. In addition, the article contains solutions to various problem situations, the expression of psychological situations and theories. Various views of the modern approach are also enriched with sufficient theoretical views in the article.*

**KEY WORDS:** *Interface, working program, bot, information technology, fundamental need, aspect, CEFR, graphic organizers, CD players.*

After our country gained independence, interest in teaching foreign languages increased and many opportunities were created for young people. As our first president, Islam Karimov said: "Currently, teaching foreign languages is given great importance in our country. This is certainly not for nothing. There is no need to overestimate the importance of perfect knowledge of foreign languages for our countries, which are striving to take their rightful place in the world community today, and for our people, who are building their great future in solidarity and cooperation with our foreign partners. As a logical continuation of these thoughts, the Presidential Decree "On measures to further improve the system of teaching foreign languages" adopted on December 10, 2012 expanded the opportunities for learning foreign languages. In our republic, new methods and requirements have been developed in accordance with the European Framework of Reference for Teaching Foreign Languages and the Evaluation of Knowledge and Skills of Foreign Language Teachers (CEFR). According to it, textbooks were created for students of general education schools and vocational colleges. In accordance with these requirements, classrooms were equipped with stands and new information and communication techniques. The demand for learning a foreign language is increasing day by day. Foreign language science is divided into four aspects (reading, speaking, listening comprehension and speaking), and separate concepts and skills are given for each of them. Educational technologies are effective use of modern information technologies in the educational process. It is also intended to increase the quality and efficiency of education by introducing modern innovative technologies into the educational process. In particular, there are several advantages of using such information and communication technologies in learning a foreign language. The role of modern technology in language learning and teaching is incomparable. The use of technological tools is useful in every aspect of learning a foreign language (reading, reading, listening and speaking). For example, in order to listen and

understand, of course, it is impossible to carry out this process without a computer, player, and CD discs. Listening comprehension is one of the most important parts of language learning. At the same time, the reader is required to pay attention to the speaker's pronunciation, adherence to grammatical rules, vocabulary and its meanings. An important factor in the use of modern technologies in the educational process is that students know information and communication technologies well and are able to use them. Teaching and learning a foreign language using modern technologies is one of the most fruitful ways. In this process, including:

- ▶ when-using computers, the student can watch and listen to foreign language videos, demonstrations, dialogues, movies or cartoons;
- ▶ it is possible to listen and watch foreign language radio broadcasts and television programs;
- ▶ Use of tape recorders and cassettes, which are considered a more traditional method;
- ▶ CD players can be used.

The use of these technical tools makes the process of learning a foreign language more interesting and effective for students. Today, teaching lessons through interactive games is becoming a tradition in schools. It is known that the lesson is conducted based on various games, which ensures that student's demonstrate their capabilities, concentrate, improve their knowledge and skills, and become stronger. The basis of the use of game technology is the activity that activates and accelerates the student. According to psychologists, the psychological mechanisms of playful activity rely on the fundamental needs of a person to express himself, find a stable place in life, self-control, and realize his potential. Any game should be based on generally accepted educational principles and tactics. Educational games should be based on educational subjects. In the process of games, the student is more interested in this exercise than in a regular lesson and is more active. It should be noted that the game is, first, a method of teaching. Pupils participate in game lessons with interest, strive to win, and the teacher provides education to the pupil through them. The student believes that he can speak, listen, understand, and write in English while playing games, he is interested. We know that in the current educational process, the student should be the subject. Focusing more on interactive methods will increase the effectiveness of education. One of the most important requirements for English language classes is to teach students to think independently. Today, English language teachers are using the following innovative methods based on the experience of pedagogues from the United States of America and England:

- ▶ To apply this method of "Creative Problem Solving", the beginning of the story is read, and the judgment of the students is referred to how it will end;
- ▶ "Merry Riddles" teaching riddles to students is important in teaching English, they learn unfamiliar words and find the answer to riddles;
- ▶ "Quick answers" helps to improve the effectiveness of the lesson;
- ▶ "Chigil yozdi" ("Warm-up exercises") using various games in the classroom to interest students in the lesson;
- ▶ "Pantomime" (pantomime) this method can be used in a lesson where very difficult topics need to be explained or when written exercises are done and students are tired;
- ▶ "A chain story" method helps students to develop oral speech;

► "Role games" (Acting characters), this method can be used in all types of lessons.

In order to teach the profession, people in professions such as "Interpreter", "Translator", "Writer", "Poet" can participate in the class and talk with students; ► "Thinkers meeting" poets and writers such as U. Shakespeare, A. Navoi, R. Burns can be "invited". At such a time, using the wise words they said in the lesson will help young people to be educated as perfect people;

► The "When pictures speak" method is very convenient and helps to teach English and develop the oral speech of students, for this it is necessary to use pictures related to the topic;

► Quiz cards are distributed according to the number of students and allow all students to participate in the lesson at the same time, which saves time.

As we have seen, each innovative technology has its own advantages. In all such methods, cooperation between the teacher and the student, the active action of the student in the educational process is envisaged.

In accordance with these requirements, classrooms were equipped with stands and new information and communication techniques. The demand for learning a foreign language is increasing day by day. Foreign language science is divided into four aspects (reading, speaking, listening comprehension and speaking), and separate concepts and skills are given for each of them. Educational technologies are effective use of modern information technologies in the educational process. It is also intended to increase the quality and efficiency of education by introducing modern innovative technologies into the educational process. In particular, there are several advantages of using such information and communication technologies in learning a foreign language. The role of modern technology in language learning and teaching is incomparable.

He use of these technical tools makes the process of learning a foreign language more interesting and effective for students. In the process of globalization, it is difficult to imagine our life without the Internet. It is one of the most effective ways to use it effectively in the process of learning and teaching a foreign language. You will have the opportunity to communicate with people who speak a foreign language through the Internet. You can improve writing practice by writing letters via e-mail. Bringing modern communication technologies into the educational process, using them purposefully and correctly, and using them to increase the student's interest in a foreign language and increase the effectiveness of teaching is the most important issue. Through this, the opportunity to use innovative technologies of education will be created and the demand will increase. Today, there are several different methods of innovative educational technologies. If they use wide and various methods to cover the topic in classes, the efficiency of the lesson will be high and the increase of students' interest in the lesson will be ensured. It is intended to increase the effectiveness of education by introducing innovations into the educational process and implementing them. The use of various role-playing and action games in the teaching of foreign language classes increases the interest in the lesson and language learning. It helps students to communicate with others by working in pairs or small groups. The use of graphic organizers in the educational process is one of the most important ways to illuminate the topic and deliver it to students. It is also possible to use several different graphic organizers to cover the same topic. When teaching a foreign language, it is

appropriate to use graphic organizers to explain new words and grammatical rules related to the topic. It will also be easy to remember if these are presented through graphic organizers.

The effectiveness of using different tables in the process of teaching a foreign language is also high. Using tables in the educational process, students can learn a certain grammatical rule, for example, making sentences using tenses, placing new words. At a time when the need to learn a foreign language is high, effective use of modern information technologies and innovative educational technologies in the educational process will make this process effective. The effectiveness of innovative educational technologies lies in their correct and effective use in the educational process.

In short, because of using innovative methods in English lessons, students' logical thinking skills develop, their speech becomes fluent, and the ability to quickly and correctly answer is formed. Such methods make the student eager for knowledge. The student tries to prepare thoroughly for the lessons. This makes students active subjects of the educational process. As the education system sets itself the task of educating a freethinking, well-rounded, mature person, in the future, we future teachers will contribute by developing ways to effectively use innovative technologies. Possible.
